And the count **continues.....**

## About Owner

Hello Guys, my name is Balwant Singh. I am from Hisar, Haryana. Being a techno enthusiast, I have completed various technical degrees as my educational qualification. I completed my Diploma in CSE in the year 2010. After that, I pursued my B. Tech Degree in Computer Science and M.Tech in Computer science as well.

I too have qualified for some well-known competitive exams like HTET CSE (in the year 2016 & 19), and UGC Net CSE In 2017, I started learning HTML to gain expertise in web development.

During my studies, I worked on several technical projects. In B. Tech, I worked on 'College Management System' and 'Event Management System'. And, in M. Tech I worked on 'Performance Analysis of Load Balancing Techniques in LTE/LTE-A Networks'. I am also working as Freelance technical support from 2012 till now.

During my M.Tech, I provided technical training to my fellow mates. During the pandemic (in lockdown), while staying and working from home, I founded Quick App.

A few years back while working on my laptop going through some random websites, I found hisarbazar.com. It was a very unique concept. I got awestruck by the thought of the makers and decided to create a similar website.

Later I came across my ideas and created a website named [www.onlinehisar.com](http://www.onlinehisar.com). Being a student of computer science, I was totally aware of the requirement of ample knowledge of HTML, CSS, and Java to get the job done efficiently. But due to a lack of perfect knowledge & experience, I wasn't able to do that at that time.

I decided to learn them and started exploring online resources. I too started visiting college libraries to read books related to HTML, CSS, and C#.

After some time, I joined a company as an industrial training intern under the B. Tech program and learned ASP.Net. I developed a full-fledged College Management Software as my project. During my last year, I joined Some IT Company in Hisar for my industrial training.

I learned a lot in website development there and improved my skill.

After the completion of my Graduation, I achieved 2nd rank in the All-India State University Entrance Exam. And, because of that, I got admission to M.Tech (CSE) in GJU Hisar in the year 2015. I also qualified for HTET in Computer Science in 2016.

I have completed several web developments projects successfully which I was picked as a freelancer. Later in the year 2018, I got selected and qualified UGC NET in computer science with a 98.03 percentile. During pursuing my Masters, I started teaching computer science to the students who were preparing for IBPS, KVS, NVS, and other state-level competitive exams. I used to teach website Development to the learners. Also, I developed "Task Management" with proper IEEE stand documentation and submitted research work successfully.

My research work was based on the "Performance Analysis of Load Balancing Techniques in LTE/LTE-A Networks". I also participated in UGC Conference on 5G Network Testing using Soft Computing. After the completion of my M.Tech, I started teaching, done several projects of Website Development, and also picking projects & working on the same. In the year 2020, I founded Quick App Technologies. I expanded my team because I want to work on more complex projects .

I also learned Angular, React JS, Python, .Net Core, as well as Digital Marketing, to remain updated with the latest technological trends.

Now, I and my Quick App Technologies team handle the projects very efficiently and provide service in multiple domains like Web Development, Web Designing, Digital Marketing, App Development, Software Development, Content writing, etc. You can avail our services for these purposes if you are seeking for a renowned company. We assure you to provide top-class web solutions at the best rates possible.
